Selected Experience

- User Experience Architect for State Farm Insurance: Primary responsibility was to maintain and make updates to legacy UX Design project artifacts. Worked directly with Digital Business Analysts and User Interface Designers in Bloomington to transition this work to the Atlanta Hub. Demonstrated strong user-centered design experience in: User Interface Design User Analysis/ Requirements Visualization Using iterative work processes Recent mobile web and/or app User Interface design experience Created visual design concepts based on input from multi-disciplinary team Worked directly with business teams and other UX Design team members to create rapid visualizations of business requirements during working sessions. Created high-level and detailed visual digital artifacts, such as high-level wireframes, interaction flows, detailed wireframes, screen specifications based on minimal direction .
- User Interface Designer/Developer Innercity Creative Group LLC.: Designed and Developed HTML, CSS, JAVASCRIPT, and content management websites for startup companies and Fortune 500 clients. Prototyped, Designed and Developed single page application from start to completion for upcoming startup web and mobile app.
- User Experience Designer for XO Communications: Built wireframes and prototypes for XO 360 Customer Relations Management Portal which is a tool for Customer Service Managers and Care and Repair reps that merged the data from various systems into one and presented it to them in a sleek UI interface. Designed and prototype ideas for future Enterprise Dashboard and layout for XO360. Converted designs into code. Developed the front end portion of the application using Grails, HTML5, Bootstrap, and Angular.js. Updated existing Service request page to use Angular JS and JSON API. Designed future layout for Dashboard, Account page and Service Request page.
- User Interface Developer for Alcon: Developed Next Gen Toric calculator for customers to use for calculating incisions for insertion of Toric contact lense into eye for glaucoma patients. Used Javascript, Raphael.js, CSS3 to create animation and calculations for visual appeal. Used Apex & Visual force pages to create the single page application calculator which in turn returned the correct angle for the incision for eye surgery.
